## **MONUMENT FLORA**

Easy

Challenge Directions: The flora of the Organ Mountains Desert Peaks National Monument is diverse and abundant. It includes many rare plants and five species found only in the Monument. In this challenge you will identify 10 of 12 common plants found throughout the Monument.

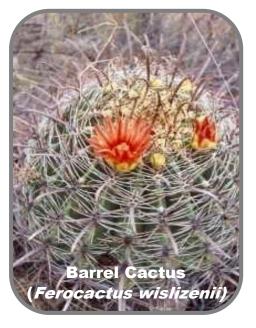

Take a selfie by each one, post it to your profile,

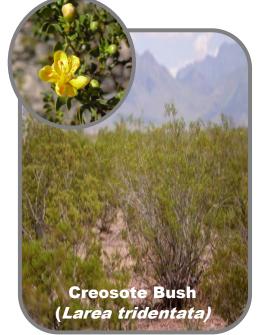

and tell us where you found it—(e.g., Aquirre Springs). A good resource for more information is http://swbiodiversity.org/seinet/, which includes a searchable database of plants. The app,

iNaturalist, can help you identify plants on your hikes and lets you contribute your findings to a biodiversity database.
